Michael D. Breitenstein won the Innovation Award 2009

Category: D-ITET

Michael D. Breitenstein and other researchers from the [Computer Vision Lab](#) won the [Innovation Award 2009](#) of the Information Technology Society of [Electrosuisse](#) for their research project.

[The algorithm](#) estimates motion patterns of persons from live video by finding and tracking an unknown number of people, without any other information than the pure image. This makes it suitable for a wide range of different applications like traffic security, visual surveillance, robot navigation, sports analysis or entertainment industry.
